

Hardware-Independent Imaging –

The Universal Imaging Utility creates a true Hardware-Independent Image more efficiently, completely and reliably than any other software package.

The Importance of Hardware-Independence

Binary Research, the worldwide Distributors of the UIU and inventors of disk-imaging as you know it and original developers of Ghost (the world's first cloning utility and now owned by Symantec), have spent over a decade in the cloning field. As cloning software has evolved, the System Administrator's burden of creating, storing and maintaining multiple Image files has become increasingly difficult. You are faced with the choice of juggling dozens of Images or doing extensive post-cloning configuration to get the computer to boot.

It's not a Master Image if You're a Slave to it

Today, unlike the 1990's, cloning is no longer a special feat. We feel that way about *true* hardware-independent imaging. An Image created on one Windows-based computer should work on any other, regardless of make or model, without you having to search for and archive a library of thousands of device drivers, create a sysprep file, program an XML answer file or perform IT magic to get your systems to boot.

UIU for you!

The Universal Imaging Utility (UIU) was the world's first (and remains the only) tool that works alongside

NOW AVAILABLE: Version 4

BRI is pleased to announce the release of the **Universal Imaging Utility ver 4**. New features and enhancements make this a must-have application for Network Administrators seeking to maximize efficiency and performance. See reverse for a detailed feature list.

any cloning package, enabling you to create a single Hardware-Independent Image for any Vista, XP or Tablet computer. The result is an Image that works cleanly on all your Windows computers – whether they're desktops or laptops!

Simple Solution for Tough Times

The UIU plays an integral role in reducing the growing burden on IT departments. By simplifying the task of image creation and deployment, personnel are able to focus on more critical and strategic tasks. Troubleshooting blue screens or tracking down missing plug-n-play IDs are not in that category. Let the UIU, a simple, one-of-a-kind solution, handle that.

UIU Features

- Works with your existing cloning software, including Ghost, Altiris, Acronis, LANDesk, Zenworks, Microsoft Deployment Toolkit and more.
- Enables the creation of a single hard-drive image, which can be deployed with cloning software to virtually any computer regardless of make, model or configuration.
- Designed for simplicity – run the UIU on your source machine immediately prior to creating the Master Image.
- Compatible with Microsoft Windows Vista, XP and Tablet PC.
- HAL detection and compatibility with ACPI, Uniprocessor and Multiprocessor (including HTT & Dual Core) systems ensures one-image compatibility with disparate computers.

- The UIU wizard helps create both the unattend .XML file for Vista or the Sysprep answer file through an easy-to-use GUI or allows you to import your existing file.
- Includes the latest drivers from Intel, nVidia, Via, 3Com, Broadcom, ATI, Realtek, as well as PC manufacturers such as Dell, HP, Compaq, IBM, Panasonic and more.

New in v4

- UIU Discovery Tool allows you to apply only drivers applicable to your environment, decreasing UIU run-time and post-deployment driver installation.
- Automated product update feature increases update speeds and decreases wait time.
- Master Image Machine Integrity Check (**MIMIC**) is performed by the UIU prior to cloning, which authenticates and optimizes the model machine.

- Newly formatted MIMIC selection window with multi-selection format allows you to view, set defaults for and apply available remediation procedures.
- New GUI is designed for simplicity and consolidates user interaction to streamline preparation process.
- The library of 26,000+ plug-and-play IDs, included with the UIU, has been streamlined, allowing for smaller database size, more accurate hardware detection and decreased UIU run-time.

UIU License Pricing

No. of Workstations*	List Price Per (\$US)
100-249	\$20.14
250-499	\$14.63
500-999	\$12.51
1000-1999	\$11.24
2000-4999	\$10.07
5000 +	Please Call
Media Pack (CD and Manual)	\$20.00

Subscription for updates, upgrades and support is renewable on an annual basis.

* The UIU is licensed based on the number of PCs that receive an Image prepared with the UIU. Pricing and terms are subject to change without notice.
